

Noman Ali

Karachi, Pakistan | +92 310 0607065 | nomansoomro51@gmail.com | linkedin.com/in/noman-a-70604a175

Professional Summary

Solutions Architect with 5+ years of experience designing high-throughput polyglot microservices (Go, C#, Python) and cloud-native Kubernetes platforms. Skilled at decomposing legacy monoliths into scalable, multi-tenant architectures and leading DevOps modernization for enterprise systems.

Professional Experience

Technical Lead

Feb 2024 – Present

QBS Co., Karachi, Pakistan

Computer Vision SaaS Platform (VERSEYE)

- Positioned the platform as an AI-orchestration app that reuses a single computer vision pipeline to power multiple domain-specific products atop a distributed backend and micro-frontend UI, including employee monitoring, restaurant monitoring, planogram compliance, PPE monitoring, and quality inspection.
- Led architecture of a multi-tenant computer vision platform for multi-camera object tracking (ByteTrack, DeepSORT, OC-SORT, BoT-SORT) with global re-identification and face, gait, pose, appearance, and text-based search.
- Designed a plugin-based microservices and micro-frontend architecture exposing CV models via gRPC/REST, deployed as containerized Kubernetes workloads through a UI-driven orchestration layer for zero-downtime scaling.
- Implemented Webpack Module Federation, enabling independent build, versioning, and deployment of per-plugin micro-frontends into a single shell application.
- Delivered end-to-end workflows from detection to global re-identification, 3D depth visualization, and ONNX model optimization with genetic-algorithm-based pruning, orchestrated via Temporal.io for durable model retraining.
- Led a cross-functional team spanning computer vision, AI/ML, backend, frontend, DevOps, and analytics.

Custom SSO Platform (LOCKKEYZ)

- Authored the SRS/SDS and designed a multi-tenant SAML 2.0 / OIDC identity provider; led the Phase 1 production rollout with SAP IAS, Azure AD, and FortiGate integrations.

Microservices Template & Cloud-Native Migration

- Built a company-wide microservices template that cut boilerplate by 70–80% across 10+ projects, and led the migration from IIS to Kubernetes/EKS using Terraform infrastructure-as-code, building the DevOps function from the ground up.

Technologies: .NET Core, FastAPI, Python, C#, Go, PostgreSQL, Redis, NATS, Next.js, Docker, Kubernetes, ArgoCD, Prometheus, Grafana

Deep Learning Engineer (Part-time)

Oct 2023 – 2025

Botonetics

- Designed an agentic computer vision pipeline for automated planogram compliance, combining YOLO-based object detection, OCR, and embedding-based (CLIP) retrieval to flag misplaced or incorrect products in real time.

Senior Software Developer

Aug 2021 – Oct 2023

Ktrade Securities, Karachi, Pakistan

- Built a microservices-based virtual trading platform (.NET, Node.js, React/Next.js) with league-based competitions, supporting thousands of concurrent users at peak load.
- Decomposed two monolithic applications into domain-driven microservices with API gateways and distributed tracing, improving scalability by 40% and cutting deployment time from 2 hours to 15 minutes.
- Implemented Redis-based load balancing (+50% throughput, -25% latency) and AWS Lambda wrapper APIs that resolved CORS issues and reduced response time by 20%.

Technologies: .NET Core 3.1, React, Next.js, DynamoDB, MemoryDB, Kafka, Kubernetes, Redis, AWS Lambda

Education

Master of Science in Data Science

Aug 2023 – May 2025

National University of Computer and Emerging Sciences (NUCES-FAST)

Coursework: Advanced Generative AI, Advanced Big Data, Applied Computer Vision, Deep Learning, Machine Learning, Statistics

Bachelor of Science in Computer Science

Aug 2017 – Jun 2021

National University of Computer and Emerging Sciences (NUCES-FAST)

Coursework: Object-Oriented Programming, Data Structures, Compiler Construction, Databases, Artificial Intelligence

Key Projects

- NEED (Neuroevolution for Effective Decision)** – Open-source, 2022–Present: Compute-efficient neuroevolution framework for training autonomous agents without high-end GPUs.
- Klystr** – tools.klystr.botonetics.com: Kubernetes operations tool for cluster topology visualization, RBAC review, container image analysis, manifest management, and security posture checks.

Certifications & Publications

Best Track Lead, QBS Co. (2024–2025) | Microservices & Deployment, ASP.NET, Coursera (2021) | Artificial Intelligence, PIAIC Batch 01 (2020–2021) | HackerRank C++ (2019)

Publication: Framework for the Assessment of Human Muscles (2021) – ieeexplore.ieee.org/document/9676387

Volunteering & Leadership

Mentored junior developers on clean architecture, microservices, and DevOps practices at MIRC, improving team code quality scores by 40%. Conducted internal workshops on Kubernetes and .NET Core for 25+ interns.
